CV Boot Banding Tool – L3080

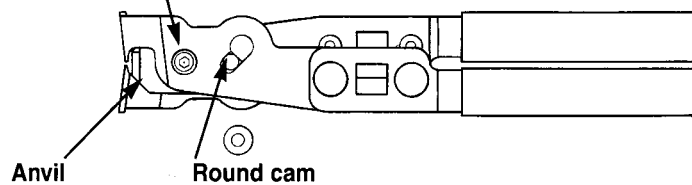

Application

For all Ear-Type clamps. Designed for use with a torque wrench as required when using Stainless Steel bands.

Instructions

The heavy, dimpled, stainless steel clamp used on some GM applications must be crimped to a specific torque setting. When crimping this clamp, the aluminum anvil on the tool must be deactivated. To deactivate the anvil, remove the round cam from the plier by loosening the hex-recessed screw.

Hex-recessed screw

Replace the cam to crimp low carbon bands.
